

Maximize the value of your network assets with Teleplan's Asset Management Solution

Building on over 30 years experience in giving devices a new lease of life, Teleplan has developed a unique Network Asset Management solution tailored to the needs of Network Operators.

Ensuring network up-time and high level of performance is our clients' main priority. In order to help them achieve this mission-critical task, Teleplan takes responsibility for the safeguard and fast disposition of inactive obsolete, and end of live equipment. Our goal is to maximise the value of these assets for our clients whether this means redeployment, re-sell, recycling or simply storage for future use. Teleplan's capabilities include a level of expertise in screening/testing for hardware systems and modules as well as software.

Benefits

- Adaptable to multi brand set ups
- In depth knowledge of multi brand equipment
- Teleplan developed screening and testing to 95% correlation and accuracy of OEM original test (RBS, Transmission boards, TRX, Rectifiers)
- Enables customers to maximize the lifecycle of their excess equipment assets
- Reduces cost of network deployment
- Lower costs and greater ROI
- Ready-made portability of our screening/testing solution
- 24/7 visibility of availability and status of all parts and equipment
- Real time inventory management
- Ability to make better, faster decision to maximise the value of assets
- Consistency of service disregarding the origin, vendor or partner involved upstream or downstream
- Full compliance with internal controls and local legal environmental requirements
- Value recovery of equipment

Teleplan's Asset Management Solution (TAMS) provides proactive end to end management of repair and logistics processes. Features include 100% order visibility via a web portal or integration into a customer interface & controlled transition management with exception reporting.
